

ABSTRACT

Capacity planning and scheduling based on product variety

Product variety has been shown to have a significant impact on capacity planning and scheduling. However, there is a lack of empirical research on how capacity planning and scheduling are affected by product variety. This study aims to address this gap in the literature. It also aims to identify the potential benefits of product variety. In addition, it will examine the relationship between product variety and capacity planning and scheduling.

The results show that product variety has a significant impact on capacity planning and scheduling. Product variety increases the complexity of the capacity planning and scheduling problem. It also increases the cost of capacity planning and scheduling. However, product variety can also provide benefits such as increased product flexibility and improved product quality.

The findings of this study can help managers to better understand the impact of product variety on capacity planning and scheduling. They can also help managers to make informed decisions about product variety.

The implications of this study are significant for capacity planning and scheduling. The findings can help managers to better understand the impact of product variety on capacity planning and scheduling.

The findings of this study can help managers to better understand the impact of product variety on capacity planning and scheduling. They can also help managers to make informed decisions about product variety.

The implications of this study are significant for capacity planning and scheduling. The findings can help managers to better understand the impact of product variety on capacity planning and scheduling.
