is a technique to assess the efficiency of production units relative to a set of similar units.

The objective of the Data Envelopment Analysis model is to measure the efficiency of a production unit relative to a set of similar units.

operation periods.

production unit is compared to the efficient operation observed over a period of time.

and production, total money time periods, those units which are the best in the industry have the highest

satisfactory as well as the ability of a firm to operate at a profit.

available models of resource allocation are constrained by the available resources.

production unit is compared to the efficient operation observed over a period of time.

How can we estimate the efficiency of resources in a firm?

the efficiency of a firm is measured by the ratio of its output to its input.

the efficiency of a firm is measured by the ratio of its output to its input.
